

# Acid Lemon

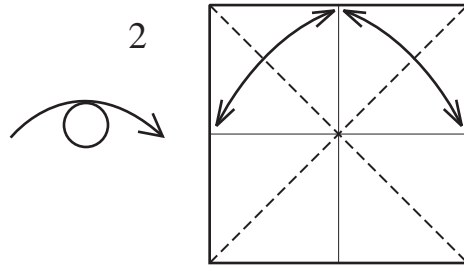

by Jack Skillman

Diagrams by Jeremy Shafer from Earle Oakes' sketches.

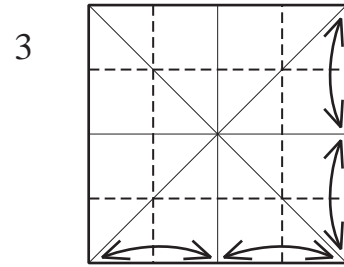

Editor's note: This model is not recommended for lemonade.

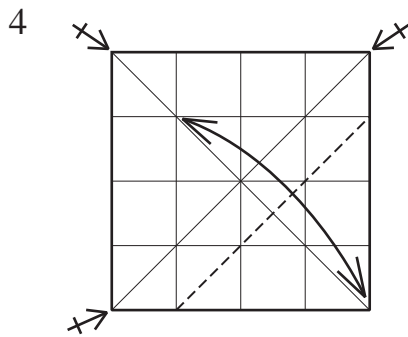

Begin colored side up. Valley-fold and unfold both ways in half. Turn the model over.

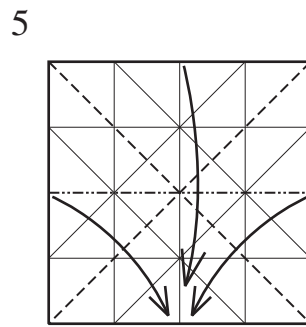

Valley-fold and unfold diagonally both ways.

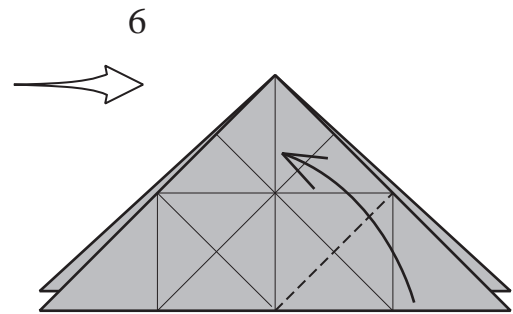

Valley-fold and unfold the edges to the center.

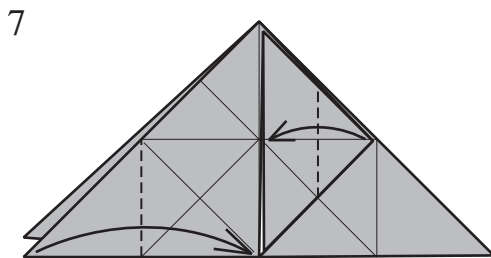

Valley-fold and unfold. Repeat on the other 3 corners.

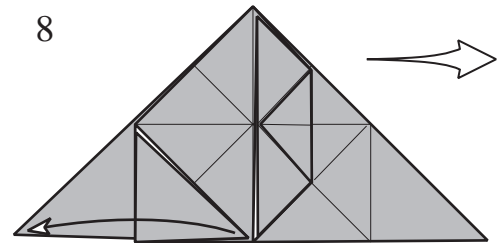

Collapse to a waterbomb base.

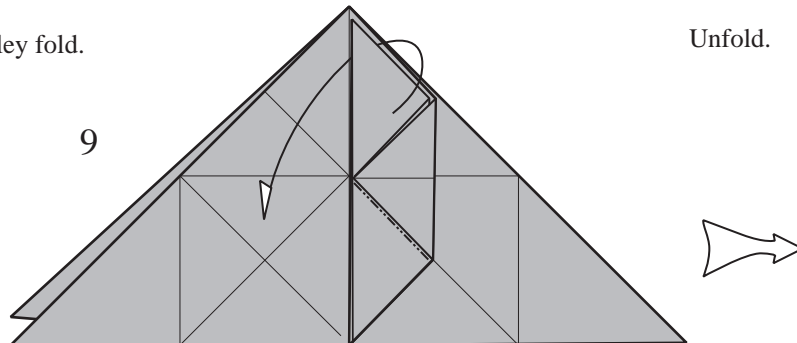

Valley-fold.

Valley-fold. Valley fold.

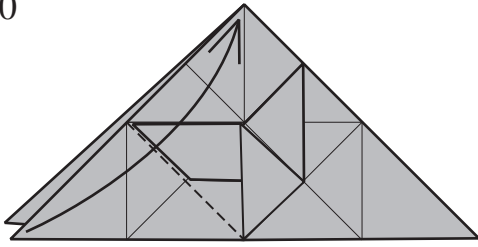

Unfold.

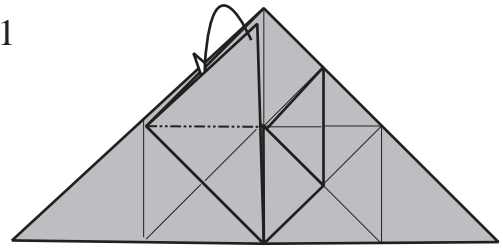

Mountain fold.

10

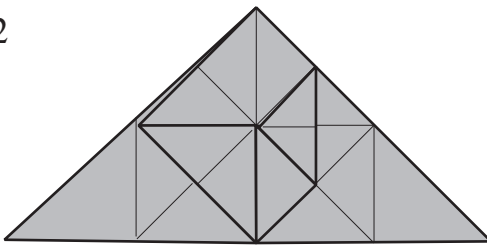

Valley-fold.

11

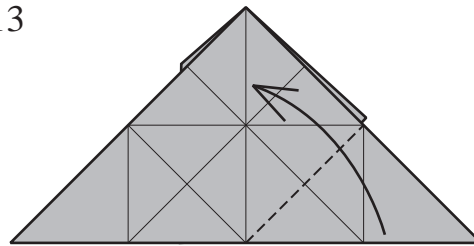

Mountain-fold, tucking the flap inside the pocket.

12

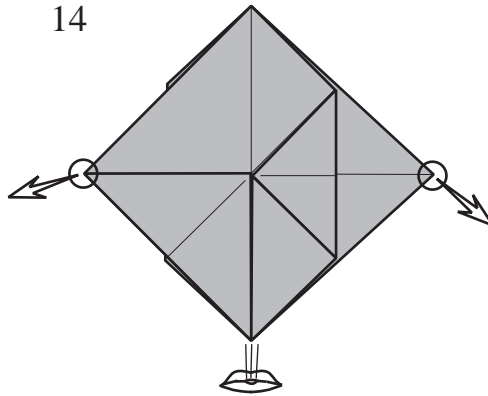

Turn the model over.

13

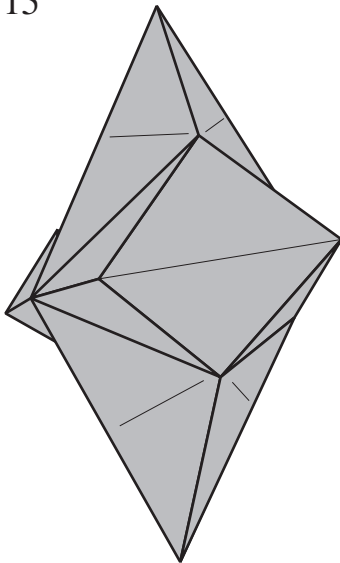

Repeat steps 6-11 on this side. Follow the steps exactly; there is no orientation change.

14

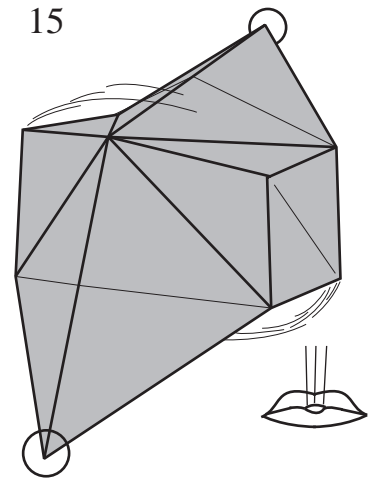

Blow in at the bottom while pulling out at the sides.

15

And voila... here is the Acid Lemon...

15

And voila... here it is from another view. To make the acid lemon twirl like crazy, hold it lightly between your thumb and index finger at its sharpest points (indicated by the circles), and blow on the model as hard as you can, directing the air slightly off center.
